Data Analysis Using Python

Edward Samuel L

Data Science Intern @Justo Global | AI & ML Enthusiast | Python Developer | CIT '26

Coimbatore, Tamil Nadu, India

Summary

I am an aspiring Data Scientist and AI enthusiast currently pursuing a B.Tech in Artificial Intelligence & Data Science at Coimbatore Institute of Technology (CIT). Passionate about solving real-world problems, I have built impactful projects in AI-powered medical diagnosis, GPS-based toll systems, and web content extraction. My technical expertise includes Python, Flask, React, MongoDB, MySQL, and Data Structures & Algorithms. I'm particularly interested in applying AI in domains like Healthcare, EdTech, and Tourism Tech. With a strong drive to learn, collaborate, and innovate, I aim to develop intelligent, user-centric solutions that make a real difference.

Experience

Justo Global

Data Science Intern

February 2026 - Present (6 months)

Coimbatore

Swinburne University of Technology Sarawak Campus

Full Stack AI Developer

July 2025 - Present (1 year 1 month)

Led development of the MediBot AI Medical Assistant Platform end-to-end, including architecture, feature implementation, and deployment workflows. Built core modules for symptom intake, AI-driven response generation, and patient-facing chat flows, while improving reliability, response quality, and usability. Delivered key projects such as secure user authentication, medical conversation history management, and API integrations for model and backend services. Optimized performance and reduced production issues through code reviews, debugging, and test coverage improvements. Collaborated across product and technical priorities to ship features on schedule and support ongoing platform scaling.

Tech Stack: Python, JavaScript/TypeScript, React (Frontend), Node.js/Express or FastAPI (Backend), OpenAI API / LLM integration, REST APIs, JSON, Webhooks, PostgreSQL or MongoDB, Git/GitHub

Orane Healthcare India Pvt Ltd

Mini Project at iCliniq (Holistic Differential Diagnosis System leveraging EHR/EMR data)

August 2024 - April 2025 (9 months)

Developed an AI-powered medical assistant that predicts possible diseases based on user-inputted symptoms and EHR/EMR data. The system uses ML models to analyze symptoms, track patient history, and provide recommendations through a user-friendly web interface. It is integrated with MongoDB for secure medical data handling and supports both backend (Flask) and frontend (React) applications.

Tech Stack: Python (FastAPI), Machine Learning (Symptom Analysis, NLP), MongoDB

Key Skills: AI/ML, Healthcare Analytics, Web Development, Data Engineering, Model Deployment

M/s LOFTY AGROTECH

Software Developer Internship

January 2025 - February 2025 (2 months)

Designed and trained multiple deep learning models using CNN (ResNet) and Vision Transformer (ViT) architectures.

Achieved a 97% testing accuracy in disease classification across multiple paddy leaf conditions.

Collaborated with a small R&D team and contributed via GitHub to streamline code and experiment tracking.

Samsung R&D Institute India - Bangalore

Mini Project at Samsung Prism (Webpage article detection and Simplified view using AI/ML)

July 2024 - February 2025 (8 months)

Developed a machine learning-based browser reader mode for webpage readability detection and content extraction. The system detects whether a webpage is readable with >95% accuracy and extracts clean content without ads, banners, or popups. Integrated with Chrome as an extension, supporting multiple languages and optimized for mobile devices.

Tech Stack: Python, ML (Feature Engineering, Model Training), Web Crawling, DOM Parsing, Chrome Extension Development

Key Skills: AI/ML, NLP, Feature Engineering, Web Scraping, Model Deployment

Intel Labs

Intern at Intel Unnati (GPS Toll-Based Simulation System)

May 2024 - July 2024 (3 months)

Developed a Flask-based web application that automates toll collection using GPS tracking. The system calculates toll charges based on vehicle movement within a geofenced area, updates balances in a MySQL database, and visualizes routes using Folium maps. Integrated Geopy for distance calculations and built a user-friendly interface for seamless interaction.

Tech Stack: Python (Flask, Geopy, Folium, MySQL), HTML, Jinja2

Key Skills: Full-Stack Development, Geospatial Computing, Database Management, API Integration

Education

Coimbatore Institute of Technology

Bachelor of Technology - BTech, Artificial Intelligence and Data

Science · (November 2022 - May 2026)
